**DETAILED ACTION**

***Response to Arguments***

1. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 2, 3, 5, 6 and 30 are rejected under 35 U.S.C. 102(b) as being anticipated by Arcaini et al. U.S. Patent 5,992,776. Referring to claim 30, Arcaini discloses an electronic control system for aggregates generating compressed air and vacuum, with programmable electronic circuits for controlling, regulating and monitoring the technical functions of such aggregates (col. 6, lines 35-46), in particular the functions of the compressed air generator or of the vacuum pump and of the associated drives, as well as of the treatment of the compressed air (col. 6, lines 31-34), wherein the electronic control system is configured as a standardized control system for employment in a multitude of different aggregates for generating compressed air or vacuum, and has an industrial PC or industrial microcomputer monitored and controlled by an operating system and comprising one or a plurality of microprocessors and a central data memory containing at least controlling and regulating software and a multitude of aggregate-specific data profiles in a recallable manner said data profiles comprising the data belonging to

Art Unit: 2125

the aggregates and their components with respect to the controlling and regulating algorithms (col. 6, lines 31-46) and/or the controlling and/or the regulating parameters and/or the technical characteristics and limit values and/or the aggregate-specific occupancy of the inputs and outputs.

Referring to claims 2, 3, 5, and 6, Arcaini implicitly discloses a real-time operating system. Since the control system is electronic, it is interpreted to be real-time. The Office interprets an operating system to be “software that controls the execution of computer programs”. An operating system is inherent to a computer-controlled control system (col. 6, lines 31-46).

***Allowable Subject Matter***

4. Claims 4, 9, 11-29, 31, and 32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

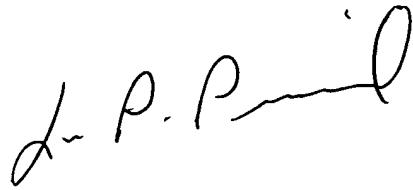

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles R Kasenge whose telephone number is 571 272-3743. The examiner can normally be reached on Monday through Friday, 8:30 - 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Leo Picard can be reached on 571 272-3749. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
